We can put code that teacher provides for us every day, as a password which would be the same for everyone

2 Options

It sends to your profile where you can sign attendance

It automatically signs attendance after clicking and shows message that attendance successfully signed.
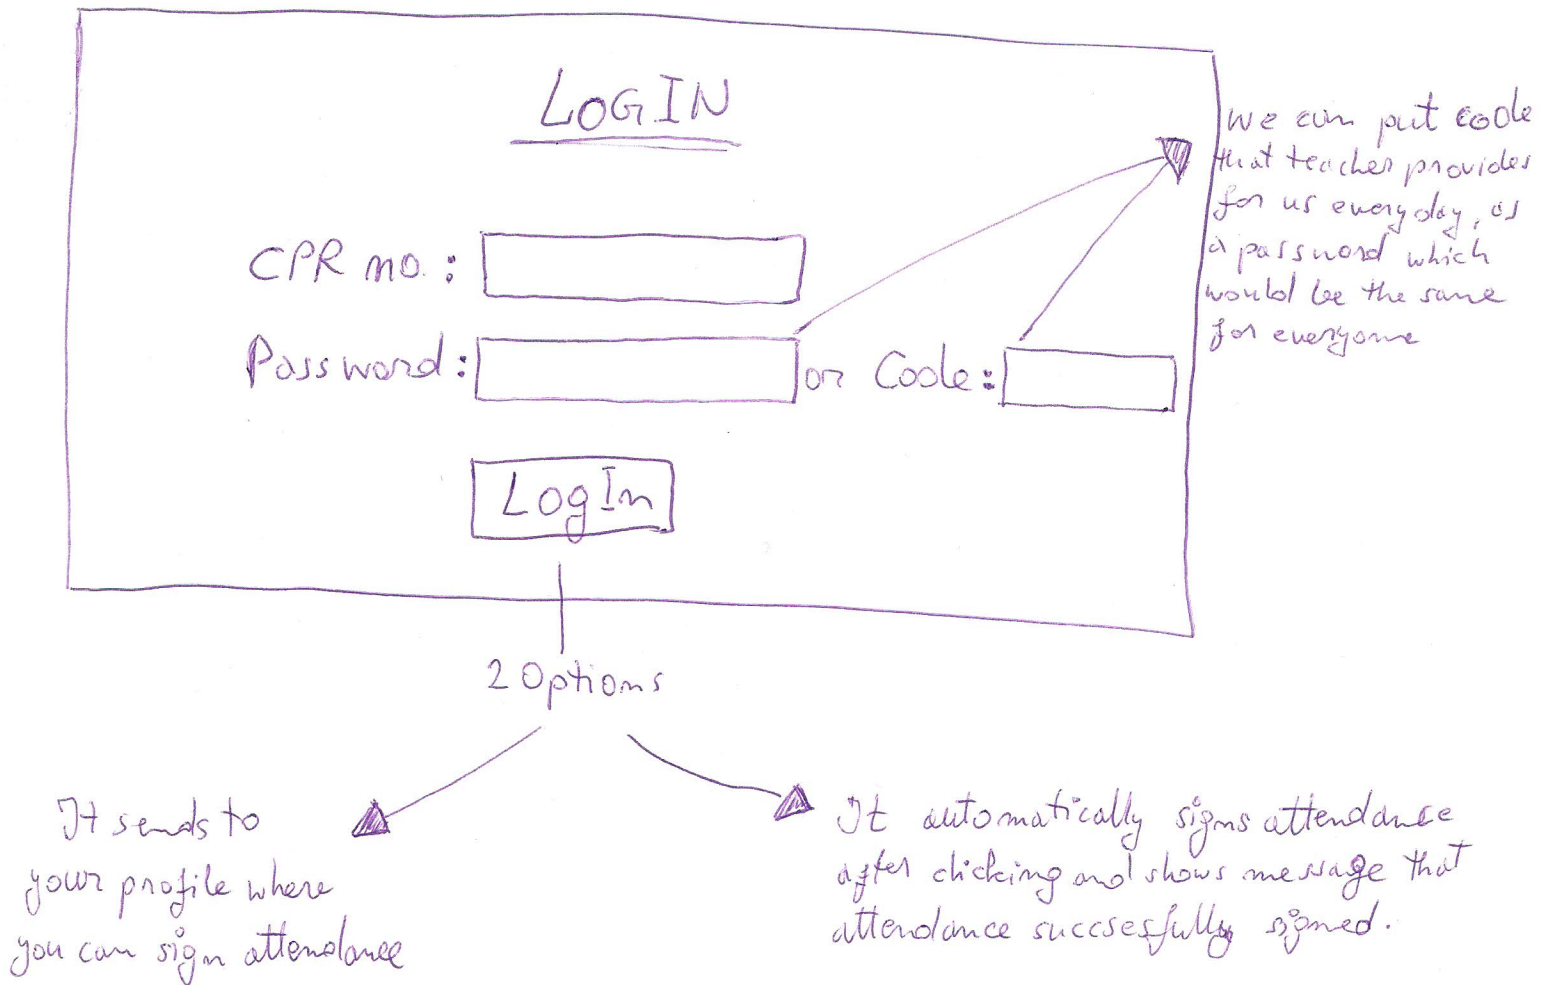

- Using the code that teacher provides us with, we can avoid students signing attendance before class starts or after it ends because we can see that code only the first 30 minutes of the class which will also serve as a password for everyone, and after that time out ~~the~~ the code will be unusable.

BURIM SYLA

PIC
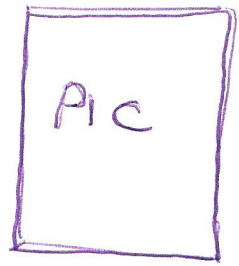

Eps. Schedule of classes :

Write code :

Sign attendance

SIGN OUT

! – Important: What if the student wants to
sign in the system after the code's timeout?!
to see the schedule of attendet classes ?!
So, maybe it's better if we use normal
password and username but after he signs in
he can put the code in and sign attendance
if he is on time!
